

Quicksheet™

Guideframe System

EFFICIENCY
PRODUCTION
America's Trench Box Builder™

Quicksheet™ Guideframes install quickly and easily with normal excavation equipment; eliminating the need for vibration machines or other on-site machinery.

The Guideframe is assembled on the ground, and does not need to be set in a pilot trench.

The post-less system requires less equipment than slide rail. The components easily pin together, decreasing installation and removal time.

The sheeting system enables easy excavation and construction around numerous cross-trench utilities or other existing structures.

FEATURES

- Designed for shoring around existing utilities
- Assembles quickly
- Two, three, or four sided configurations
- Unlimited dimension in linear application
- 50 x 50 feet capability in 4-sided configuration
- No posts; components easily pin together
- The connection adapter includes integrated spreader pipe collar for two-sided or linear configuration, as well as integrated waler brackets for "ClearSpan™" configurations
- Quicksheet can be used in conjunction with a Slide Rail System, or as a "Shore-Trak" style sheeting guide frame.

Post-less system, includes all advantages of sheeting

Dimensions 50 x 50 ft. or more possible

Perfect for shoring around cross-trench utilities
